

High Plains DataBank

Disasters may be unavoidable ...
but with High Plains DataBank you can protect
what really matters.

Our disaster recovery and virtualization services and solutions are:
Customizable • Secure • Reliable • Responsive • Affordable

The critical task of computer and server backup can be an expensive and challenging endeavor for any organization, especially for those individuals responsible for the technology concerns of the organization. Chances are you have a lot of important information on your computer systems, such as financial documents, student records, personnel information, critical files, database systems, and important proposals.

Unfortunately, computers and servers are vulnerable to hard drive crashes, virus attacks, theft, and natural disasters, which can erase everything in an instant.

The time, resources, money, and effort it takes to recover from a data loss usually well exceeds the cost to implement and maintain a good data recovery and backup system.

Current statistics show that one in every ten hard drives fail each year. The cost of recovering a single failed hard drive can easily exceed \$7,500, and success is never guaranteed.

Can you imagine the costs of recovering several hard drives contained in a single server?

Don't let this possible and highly probable issue affect you and your organization. At High Plains DataBank, we recognize that data management and disaster recovery planning is vital to the success of your business. That's why we are committed to helping you build and maintain a successful backup and recovery system by focusing not only on data archiving, but in customizable responsive, reliable data management solutions as a strategic asset to your company.

Our end-to-end solutions help you recover your data faster than traditional backup and recovery methodologies, and virtually eliminate failures by ensuring that your disaster recovery plan is reliable and secure.

We like to think of our solutions as "Recovery Planning". After all, the most important part of your backup plan is the recovery.

What Our Data Recovery Services Means to You:

- Insurance for Your Data,
- Compliance with Government and Industry Data Protection Requirements,
- Fail-Safe Measures For Business Continuation,
- Your Liability Minimized For Unforeseen Data Disasters, and
- Your Organization's Success is ensured in Data Protection & Recovery.
